

# Cancer To Be World's Top Killer By 2010, WHO Says

**Experts Predict Cancer Will Be Top Global Killer By 2010, Deaths To More Than Double By 2030**

ATLANTA, Dec. 9, 2008

**(AP)** Cancer will overtake heart disease as the world's top killer by 2010, part of a trend that should more than double global cancer cases and deaths by 2030, international health experts reported Tuesday.

Rising tobacco use in developing countries is believed to be a huge reason for the shift, particularly in China and India, where 40 percent of the world's smokers now live.

So is better diagnosing of cancer, along with the downward trend in infectious diseases that used to be the world's leading killers.

Cancer diagnoses around the world have steadily been rising and are expected to hit 12 million this year. Global cancer deaths are expected to reach 7 million, according to the new report by the World Health Organization.

An annual rise of 1 percent in cases and deaths is expected \_ with even larger increases in China, Russia and India. That means new cancer cases will likely mushroom to 27 million annually by 2030, with deaths hitting 17 million.

Underlying all this is an expected expansion of the world's population \_ there will be more people around to get cancer.

The report is being released Tuesday by the WHO's International Agency for Research on Cancer at a news conference with officials from the American Cancer Society, the Lance Armstrong Foundation, Susan G. Komen for the Cure and the National Cancer Institute of Mexico.

The "unprecedented" gathering of organizations is an attempt to draw attention to the global threat of cancer, which isn't recognized as a major, growing health problem in some developing countries, said John Seffrin, the cancer society's chief executive officer.

The organizations are issuing a call to action, asking the U.S. government to help fund cervical cancer vaccinations and to ratify an international tobacco control treaty.

"If we take action, we can keep the numbers from going where they would otherwise go," Seffrin said.

Other groups are also voicing support for more action.

"Cancer is one of the greatest untold health crises of the developing world," said Dr. Douglas Blayney, president-elect of the American Society of Clinical Oncology.

"Few are aware that cancer already kills more people in poor countries than HIV, malaria and tuberculosis combined. And if current smoking trends continue, the problem will get significantly worse," he said in a statement.
